Executive Summary

Overview

This report presents a comprehensive business analysis of the provided dataset. Key metrics, trends, and actionable recommendations are highlighted to support data-driven decision-making.

Key Findings

- The total revenue is \$329,329.80 with 8,577 orders, averaging \$38.40 per order.

Key Recommendations

✓ Optimize staff on Fridays at 12pm. Promote Classic pizzas more. Review 238 outlier orders for potential errors.

1. Perform A Comprehensive Business Analysis Of The Pizza Sales. First, Calculate K

Business Analysis: Perform a comprehensive business analysis of the pizza sales. First, calculate key metrics including total revenue, total orders, and average order value. Second, analyze temporal trends by showing the busiest days of the week and peak hours of the day. Third, break down revenue by pizza category and size. Finally, identify the top 5 best-selling pizzas and check for any extreme order-value outliers using QQR. Use multi-panel subplots to visualize these trends clearly.

Kurtosis Revenue	8.07
Top Category	Classic
Busiest Day	Friday
Peak Hour	12
Spearman Corr Qty Price	0.01

Limitations & Next Steps

This analysis was generated automatically using AI. All insights should be validated with domain expertise before making strategic decisions.

■ Recommended Next Steps

- Validate key findings with your team and domain experts before acting on them.
- Investigate any outliers or anomalies identified to understand root causes.
- Set up regular reporting (weekly/monthly) to track trends over time.
- Focus on the top 3 actionable recommendations that can be implemented quickly.
- Use insights to inform pricing, inventory, and marketing decisions.
