Records

Key Metrics Overview

The average rating of 4.1 out of 5 indicates high customer satisfaction. With 1462 products, this suggests a strong foundation for sales.

Business Impact

The 213 outlier-priced products, which are 15% of total products, may be impacting revenue by \$11.5 million, assuming an average price of \$54,000.

Key Insights

1

The average discount percentage is 47.7%, which may be eroding profit margins
→ The correlation between price and rating is weak at 0.03
✓ Action: The maximum price of \$139,900 is significantly higher than the minimum price of \$39.

Actionable Recommendations

High	Review pricing of 213 outlier products	Immediate revenue impact
Medium	Analyze top 5 categories by volume	Short-term improvement
Low	Adjust discount strategy to balance margins and sales	Long-term optimization
Low	This week, review Electronics category sales and assess discount impact on profit margins	Long-term optimization

Discount Rating Corr	-0.15	

Next Steps & Limitations

This analysis was generated automatically using AI models. All insights are based on the provided data and should be reviewed by domain experts before making strategic business decisions.

1	Validate	Confirm key findings with your team and domain experts
2	Investigate	Dig deeper into any outliers or anomalies identified
3	Monitor	Set up regular reporting to track key metrics over time
4	Act	Implement the top 3 recommendations with highest ROI
5	Iterate	Re-run this analysis monthly to track progress
